

>Extra strong magnetic foil

Magnetic foil made of strong neodymium material

In the range of magnetic foils, a further innovation supplements our extensive range of products on offer.

Newly available are plates and foil tapes made of strong and flexible neodymium material.

At a thickness of 1 millimeter, this foil approximates a value of 4 N/per square centimeter and is, therefore, approximately **ten times stronger** than the already well-known materials made of plastoferrite.

The following products are newly available from our stocks:

Item number	Description	
M36210.7	Magnetic plate	1x450x150 millimeters
M36220.7	Magnetic plate	2x450x150 millimeters

Other dimensions and self-adhesive types are available on request.

M36320.9	Self-adhesive magnetic foil tape (Nitto 5000) 20x1x10,000 millimeters
----------	--

Other dimensions are available on request

Our catalogue of products, as well as further and additional information concerning magnetic engineering and the Maurer-Degaussing process, can be viewed on www.maurermagnetic.ch
